

A search for partially contained cascades with 2 years of IceCube data

Achim Stöbl

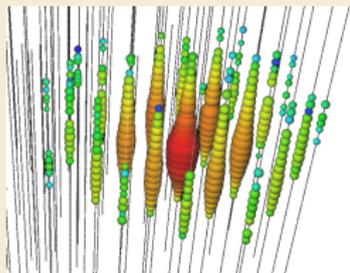

DESY

MANTS meeting, 20/09/2014, Geneva

- ▶ Search for superposition of individual Point Source flux
- ▶ All-sky ν_e, ν_τ, ν_μ (*cascades*), Northern sky ν_μ (tracks)
- ▶ Energy spectrum properties allow conclusions about source populations

Event signature

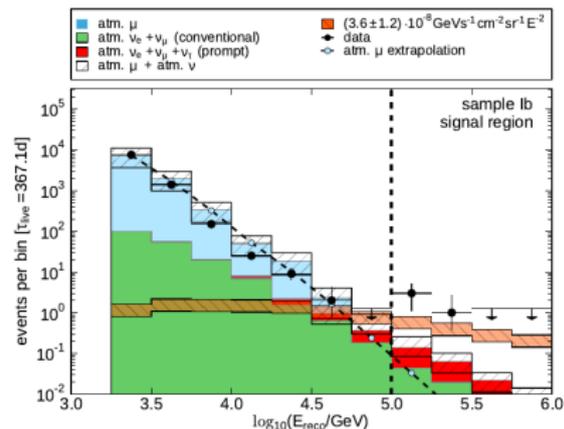

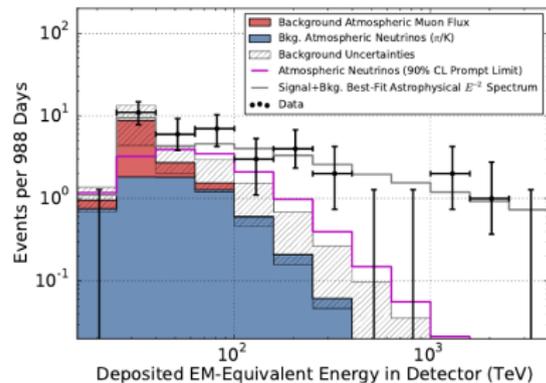

- ▶ Particle shower ("cascade")
- ▶ all-flavor NC, ν_e CC
- ▶ calorimetric energy measurement

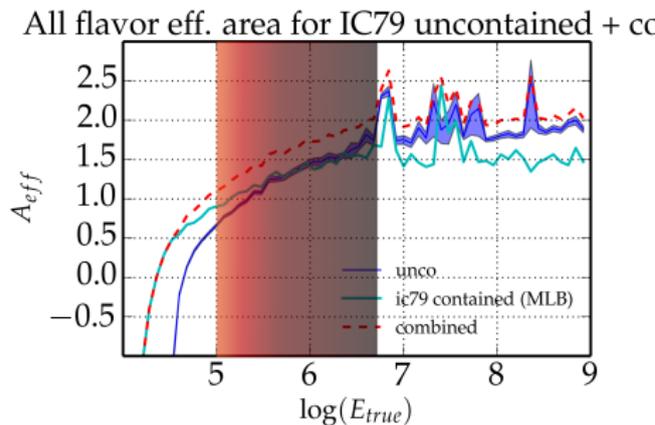

IceCube's diffuse results

- ▶ HESE search: 5.7σ over atmospheric ν
arXiv:1405.5303
- ▶ IC40 contained cascades: 2.7σ
arXiv:1312.0104
- ▶ IC59 throughgoing tracks: 1.8σ
arXiv:1311.7048
- ▶ Currently efforts on combining the results and setting further constraints on the spectrum

PCC - What to gain?

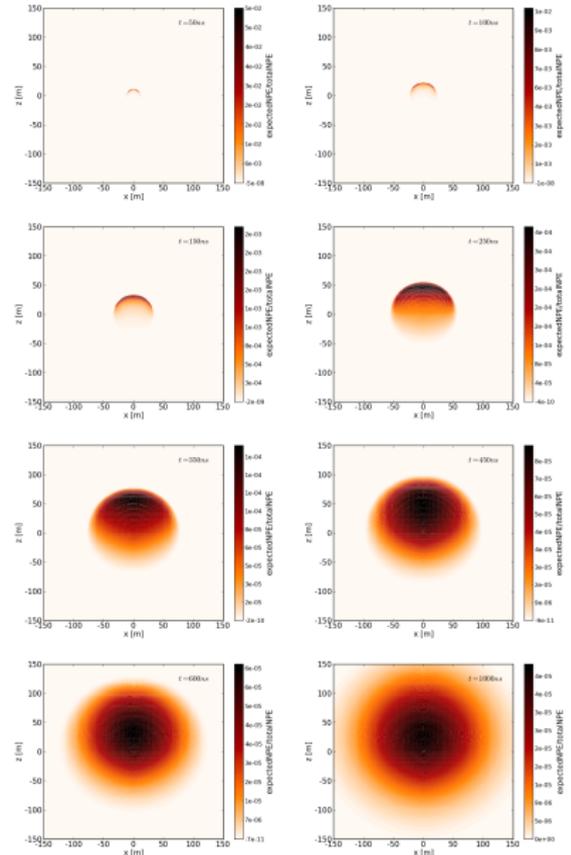

- ▶ We are still in the statistics limited regime
- ▶ Partially contained cascade volume: **347 MTon**
- ▶ Sample mostly statistical independent from previous searches
- ▶ Sensitive to fluxes **above 34 TeV** reconstructed energy threshold
- ▶ Interesting region for measuring astrophysical ν_e spectrum

*IC79 part.c. + IC79 fully c.
effective area,
yaxis: $\log(m^2)$*

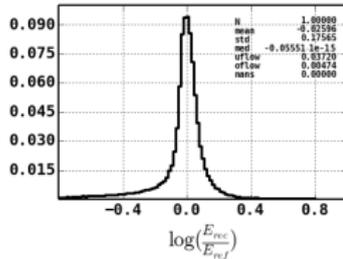

Cascade reconstruction

- ▶ 7-parameter Poisson likelihood reconstruction (energy, vertex, direction)
- ▶ Includes no-hit term
- ▶ Different ice-models can be plugged in
- ▶ Uses timing and charge information

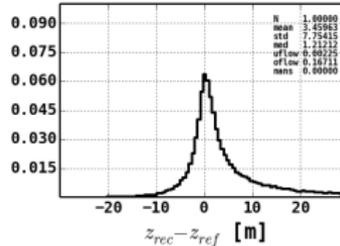

Cascade parameter resolution

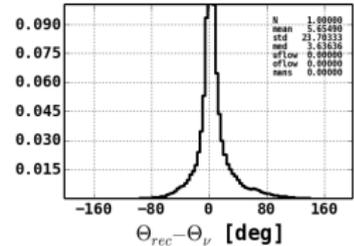

- ▶ Resolutions for partially contained events slightly worse than contained

mean = -0.05, std = .17

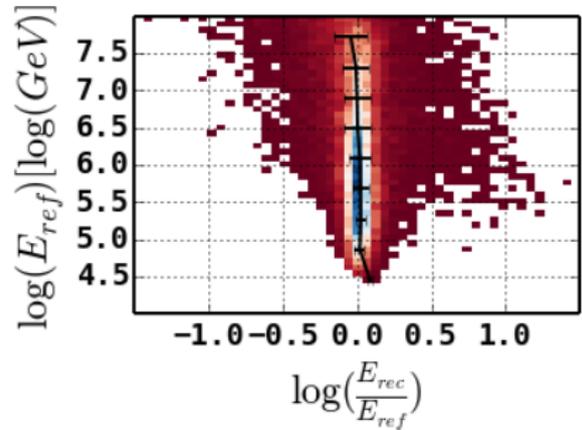

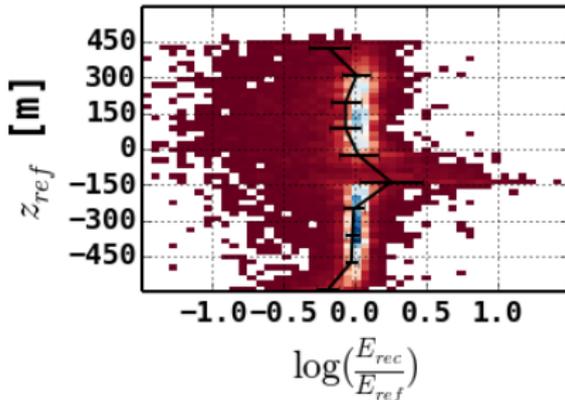

mean = 3.45, std = 7.75

mean = 5.65, std = 23.70

- ▶ For vertices further outside than 1/2 string spacing:

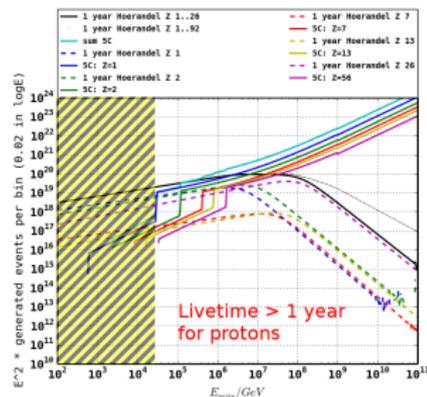

Analysis overview

target $E^{-2}\nu$ all-flavor, all-sky

technique Straight cuts

method Partially contained
cascades

background MC Background
prediction

*Background simulation:
At 30TeV/Nukleon, the
simulated proton live time
exceeds the expectations
from the 1-year cosmic ray
proton flux
[Hoerandel, arXiv:astro-
ph/0402356]*

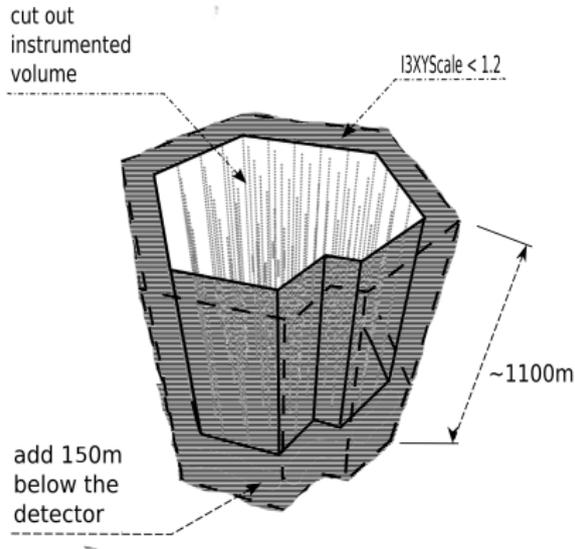

Analysis - IceCube data

- ▶ Data of 79/86 string configuration used (\approx 660 days)
- ▶ 10% data used for cut development, 3-step unblinding

eventselection - overview

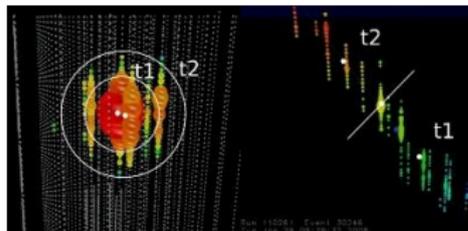

- L3 common cascade filter level
- L3a high energy precuts ($> 10 \text{ TeV}$)
- L4 fiducial volume cuts
- L5 cascade specific cuts
- L6 geometry cuts (remove "corner clippers")
- L7 final energy cut ($> \approx 30 \text{ TeV}$)

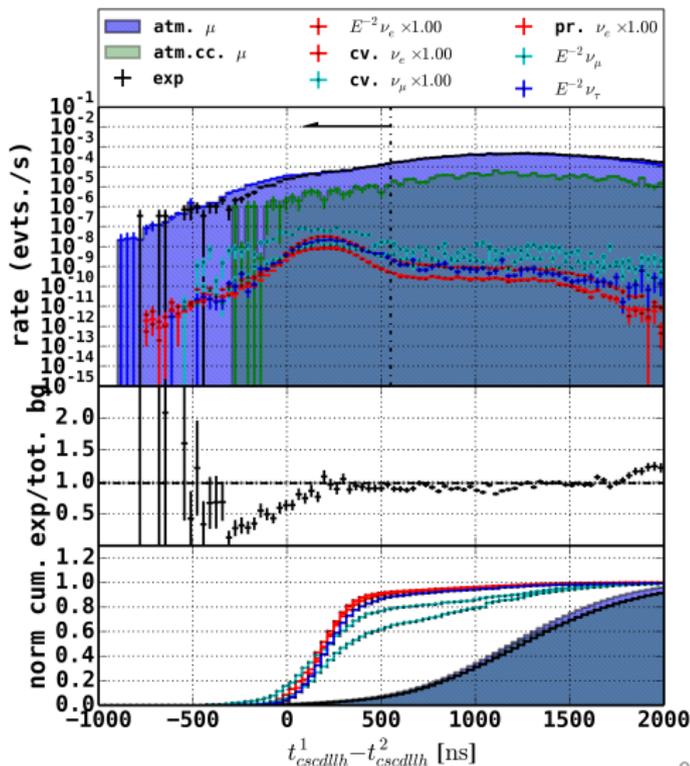

L5 cascade cuts - example cut

cascade variables

- ▶ topology
- ▶ timing
- ▶ direction
- ▶ quality

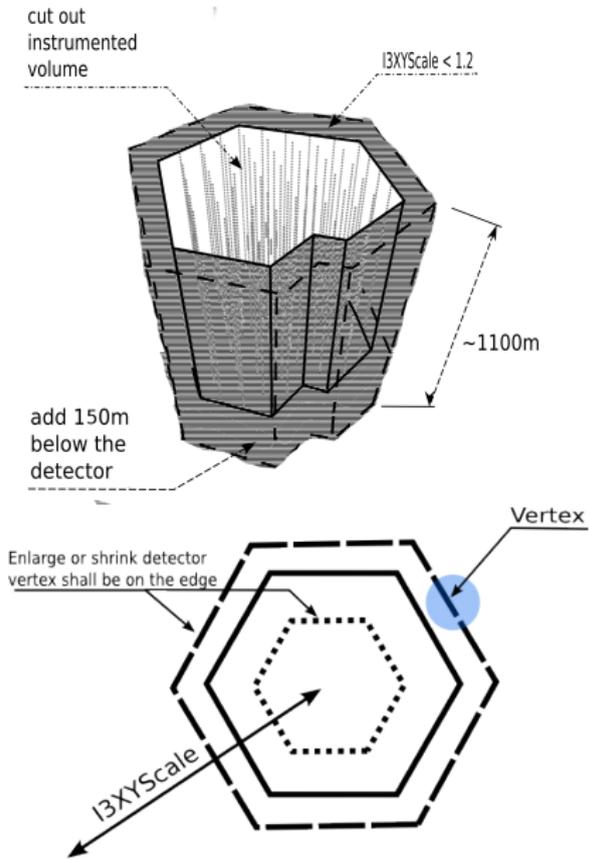

timesplit_dt@4i

Containment definitions

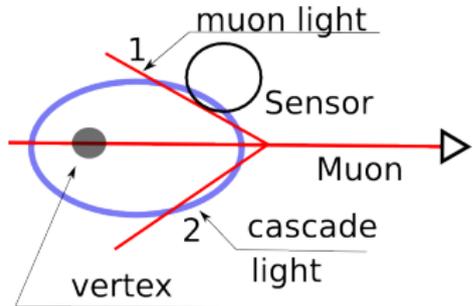

- ▶ Designed for minimal overlap with contained searches
- ▶ Cascade vertex position in "shell" region
- ▶ ≈ 1 string spacing in xy , +150 m below detector, 50m of these instrumented
- ▶ highest sensitivity in bottom region
- ▶ use scaling variable for xy scaling

Event selection - variables

“Simple” variables:

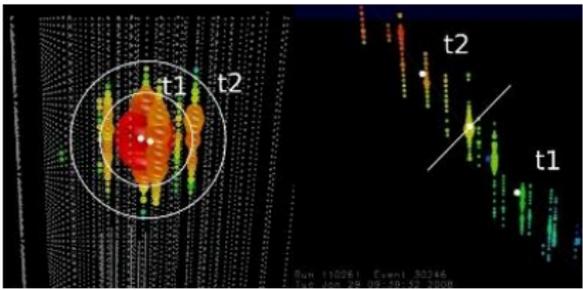

- ▶ quality
- ▶ timing
- ▶ topology
- ▶ direction
- ▶ geometry

catastr. loss

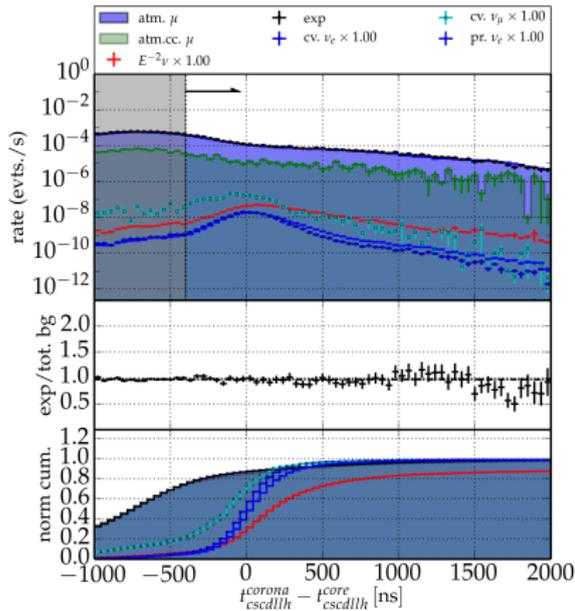

*DTNearly (superluminosity):
Time difference of first detected light (1) and expected first hit (2) from a cascade hypothesis with reconstructed vertex.*

Negative values indicate for misreconstructed events or atmospheric muons with catastrophic losses.

Example variable distributions

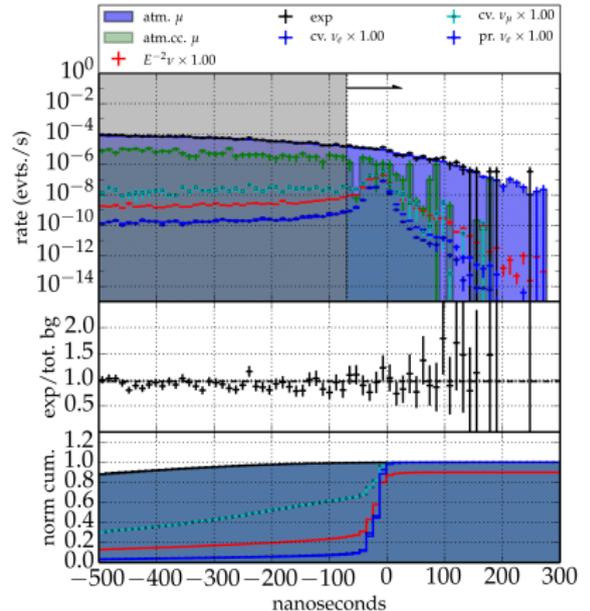

coronasplit-dt@4

CoronasplitDT: Time difference of two vertex

reconstructions A and B - A uses only pulses in a sphere
 around a seed vertex, B uses pulses in a spherical shell
 further out

dt-nearly-ice@4

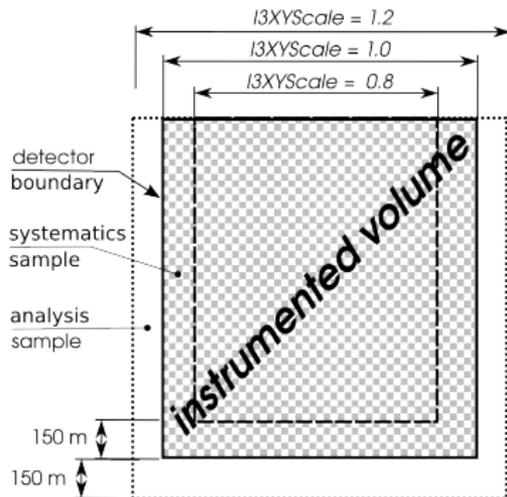

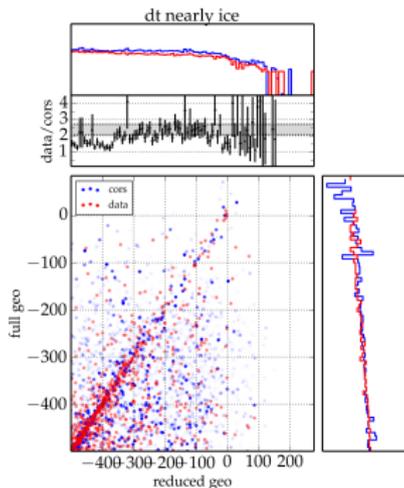

DTNearly: Time difference of first detected light and sum
 of reconstructed vertex time and geometrical flight time.

A perfectly reconstructed cascade would yield a value of
 0 if the first hit is not scattered.

Systematic Studies

- ▶ Off-signal region defined for systematic checks
- ▶ Check influence of geometry on each variable

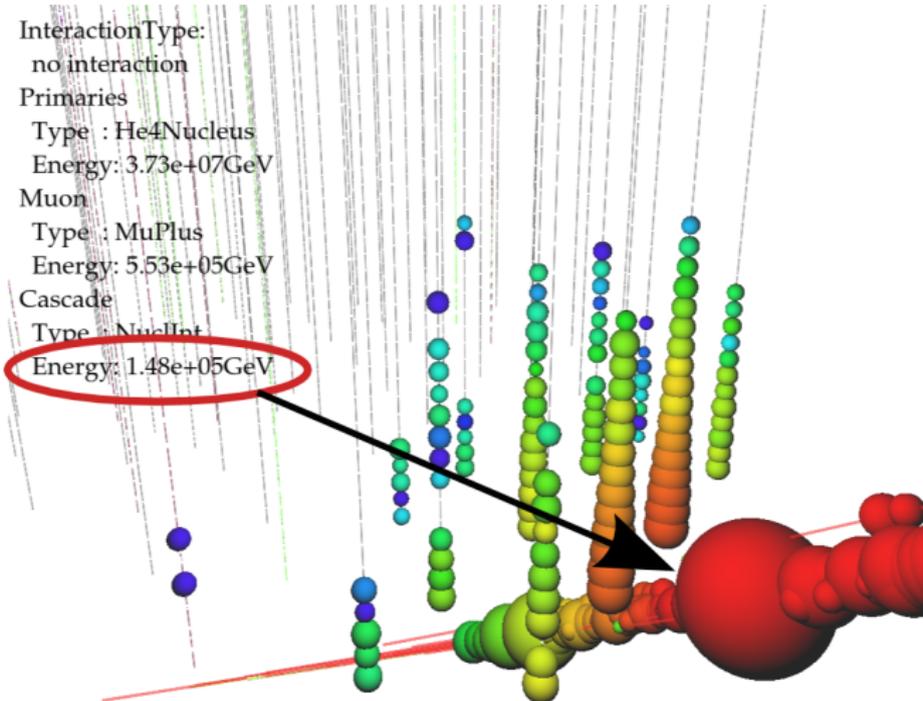

- ▶ Full-year data for off-signal region yields consistent results
- ▶ Also consistent with IceCube contained search

Dominant muon background

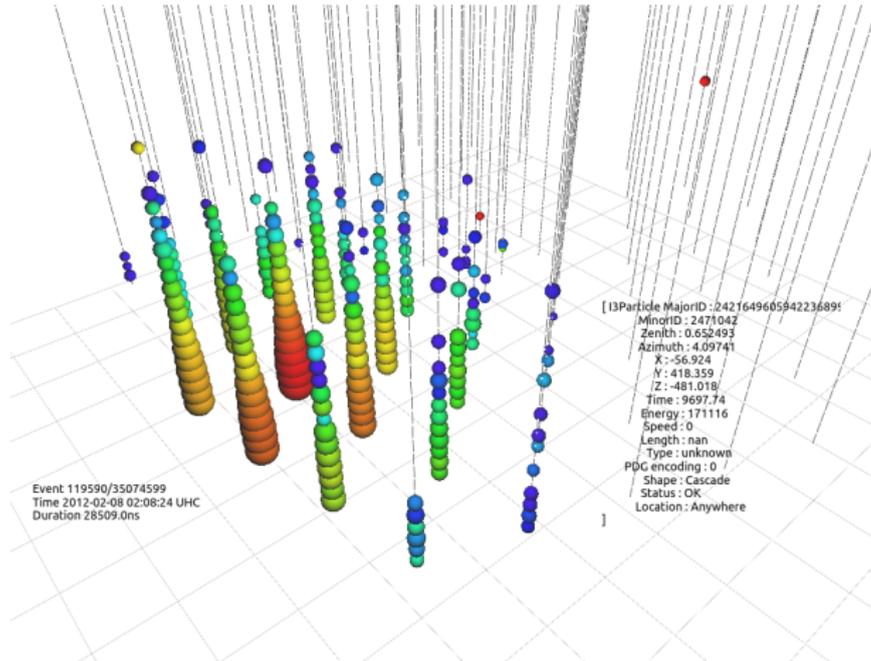

- ▶ ≈ 1.60 atmos. μ expected in IC79 data

InteractionType:
no interaction
Primaries
Type : He4Nucleus
Energy: 3.73e+07GeV
Muon
Type : MuPlus
Energy: 5.53e+05GeV
Cascade
Type : NuclInt
Energy: 1.48e+05GeV

Events in 10% test sample

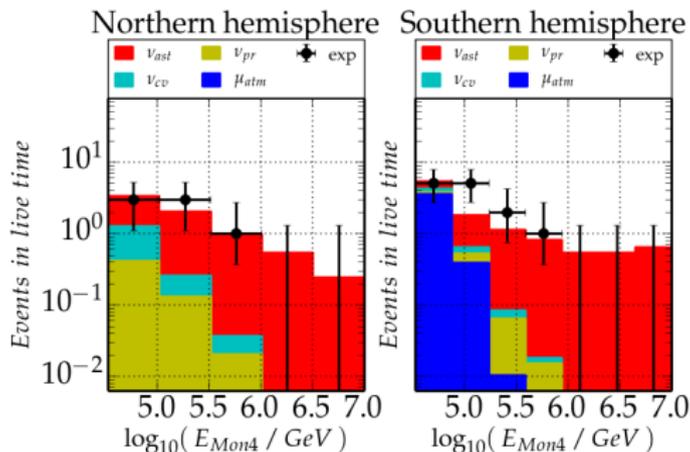

- ▶ 2 events found in IC86, none in IC79

- ▶ 171 TeV reconstructed energy
- ▶ starting on an inner string

Preliminary results

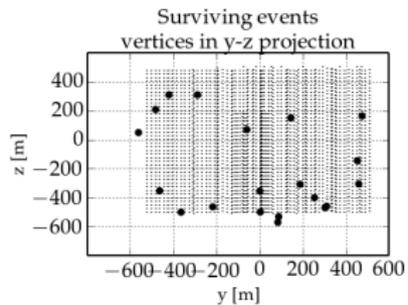

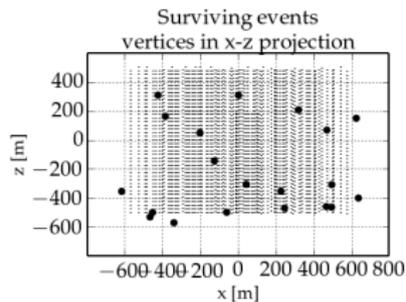

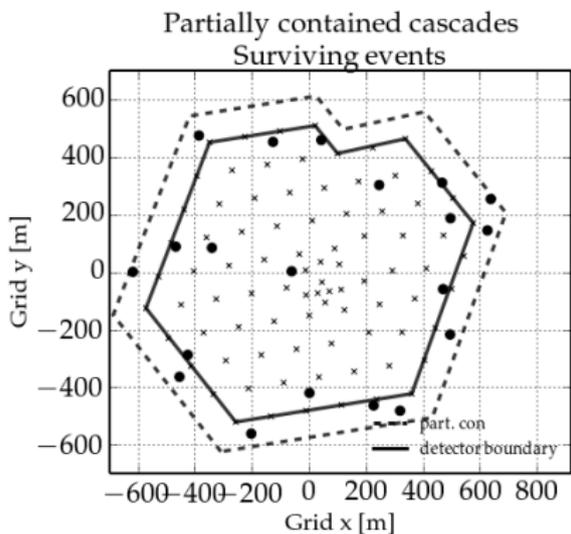

- ▶ 18 events found in 90% of data
- ▶ 2 events in 10% of data
- ▶ highest energy ≈ 578 TeV
- ▶ expected $11.7 \pm 0.5 \cdot 10^{-8} \nu_x E^{-2}$ signal
- ▶ expected background:
 - ▶ $3.8 \pm 0.4 \nu_{atmos}$ H06a/ERS w. knee (no veto)
 - ▶ $4.2 \pm 1.8 \mu_{atmos}$ (H3a)

baseline models, stacked energy spectrum for 2 years of data, N/S split at ≈ 80 deg

Distributions of vertices

- ▶ fairly isotropic

Highest energetic event - 578 TeV

Variables

NChan 175

NStr 39

QTot 6621 PE

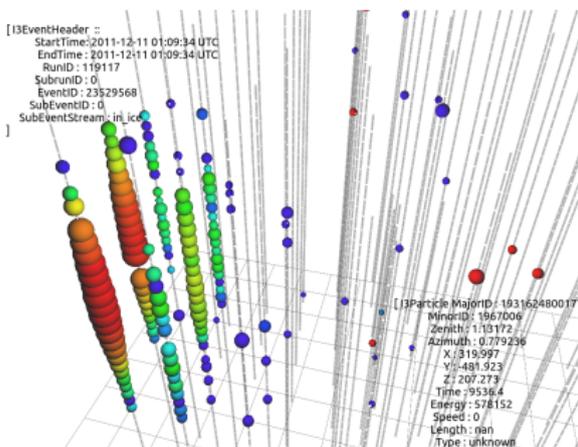

NChan (closest string) 24

closest DOM 72 m

XYScale 1.1

Zenith 64 deg

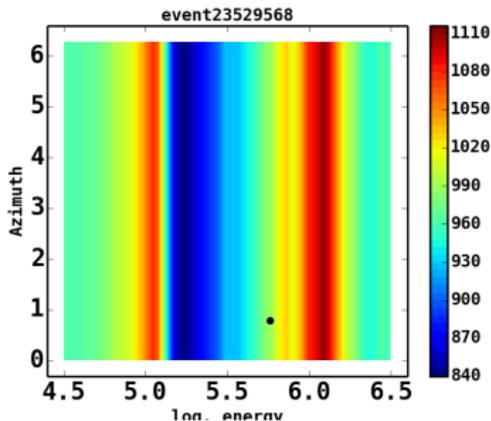

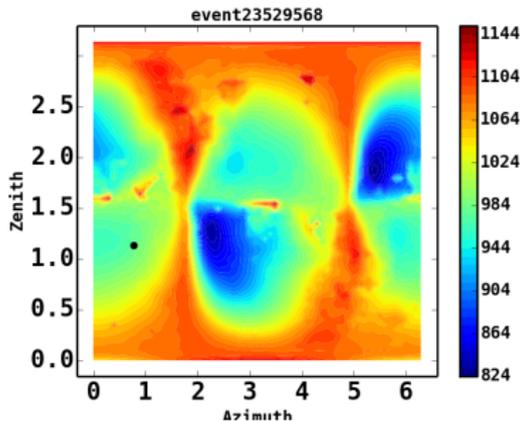

Azimuth 44 deg

- ▶ variables comparable with contained events of about 90 100TeV

578 TeV event - Lh scans

- ▶ currently under study
- ▶ energy reco not constraint by azimuth

HESE Overlap

▶ Swedish Chef (IC79)

HESE E_{rec} 165 TeV

Θ_{rec} 38 deg

PCC E_{rec} 168 TeV

Θ_{rec} 53 deg

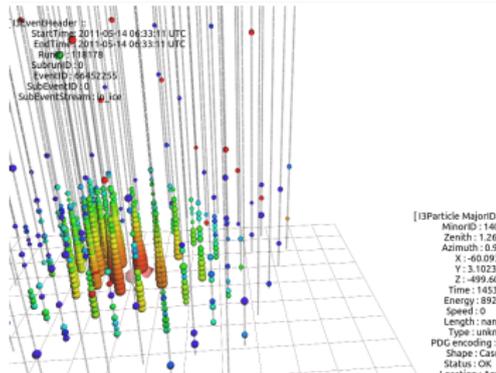

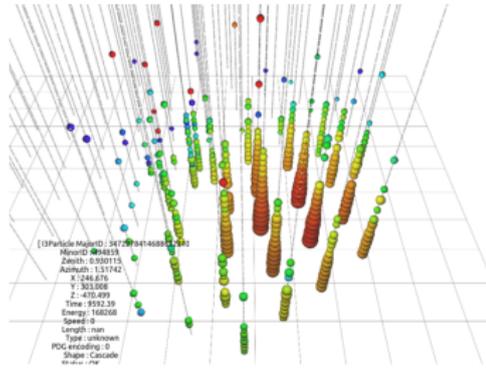

▶ Camilla the Chicken (IC86)

HESE E_{rec} 97 TeV

Θ_{rec} 60 deg

PCC E_{rec} 89 TeV

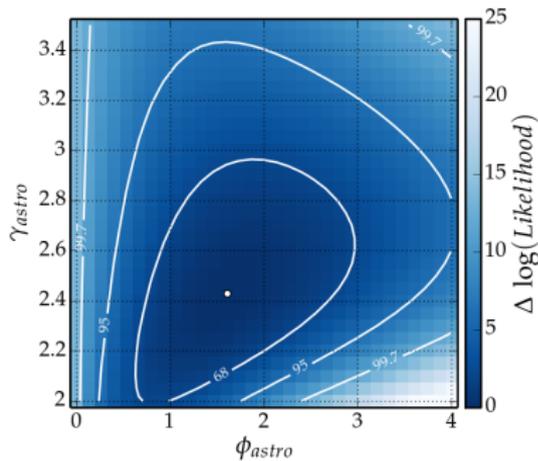

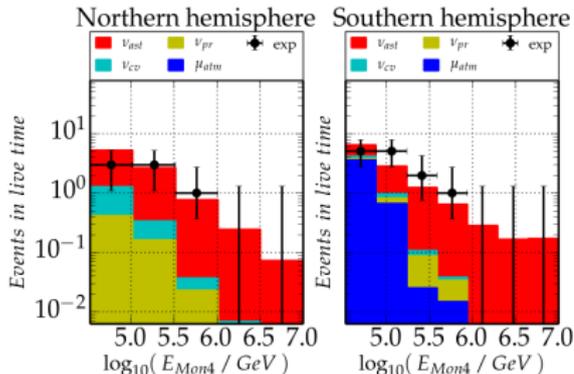

Θ_{rec} 72 deg

Best fit spectrum

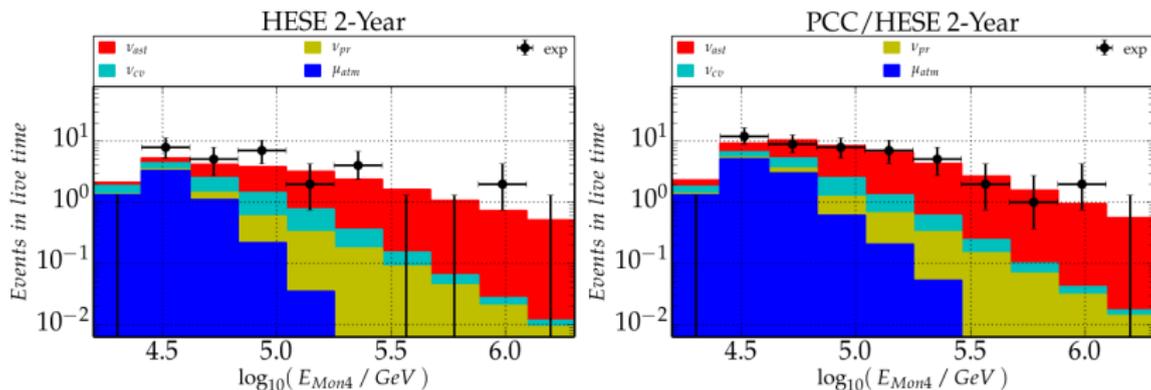

- ▶ Fit astro. index + normalization
- ▶ Prompt set to ERS \pm 40%
- ▶ Conventional set to H06/Gaisser \pm 30%
- ▶ nuisance parameters $\theta_{\Phi_E}, \theta_{\Delta\gamma_{cr}}, \theta_{\Phi_\mu}$
- ▶ currently working on θ_{γ_μ}
- ▶ astrophysical parameters not influenced by choice of ERS prior

$$\Phi = (1.9 \pm .77) \cdot 10^{-18} \text{GeV s}^{-1} \text{sr}^{-1} \text{cm}^{-2} \left(\frac{E}{100 \text{TeV}}\right)^{(2.48 \pm 0.3)}$$

Consistency with HESE

- ▶ PCC. adds 19 additional events to 2-year HESE spectrum
- ▶ stacked MC expectations
- ▶ HESE only: $E^{-2}\Phi(E) = 1.2 \pm 0.4 \cdot 10^{-8} \text{ GeVcm}^{-2}\text{s}^{-1}\text{sr}^{-1}$
best fit spectrum $E^{-2.2 \pm 0.3}$
- ▶ HESE/PCC: $E^{-2}\Phi(E) = 1.8 \pm 0.6 \cdot 10^{-8} \text{ GeVcm}^{-2}\text{s}^{-1}\text{sr}^{-1}$
best fit spectrum $E^{-2.4 \pm 0.3}$

- ▶ Performed simple, straight cut search for partially contained cascade events
- ▶ MC background prediction
- ▶ 20 events found in 2 years of data
- ▶ events line up nicely in HESE-2-year spectrum - even partly filling up “the gap”
- ▶ indications for a softer index of 2.47
- ▶ joint publication with IC79/86 contained analysis in planning
